Instrument List:

- [Yellow](#)

Discussion:

Starting 20130528-010542 UTC, XPOL-3 is in surveillance mode: scanning and recording data for one low EI PPI and one V-point PPI every 15 minutes. The radar was put in standby mode during 20130527-150000 UTC - 20130528-010542 UTC because of concerns regarding high winds. XPOL-3 will now continue in surveillance mode due to lack of strong weather echoes on-site.
